

Anne Van den Bosch

Institute for Molecular and Materials Chemistry

Anne Van den Bosch obtained her PhD degree at the Catholic University of Leuven in 2003 in the area of current steering digital-to-analog converters. She is first author of 17 publications and co-author of 5 publications.

From 2001 until 2008, she worked for the Flemish funding agency where she headed the micro-electronics and photonics team and where she represented the agency in the MEDEA+/CATRENE and ENIAC public authorities board. She is now working at imec as Vice-President Public R&D Policies and Programs and leads all imec activities related to Flemish, European and international public research policy and funding programs

She is also responsible for the contractual collaborations with international universities and research institutes. Since beginning of 2023, she is executive Vice-President of the European Association of Space Technology Research Organizations. She is member of several boards, management commissions and steering committees
